

Giftify - Project Summary

Giftify is a platform for discovering and managing gift certificates across various categories. Built with a scalable architecture and design patterns, it ensures flexibility and ease of use.

Key Features

- Intuitive gift management
- Scalable and flexible design
- Cart persistence (Cookies)

Applied Design Patterns

- Factory Method
- Strategy
- Observer
- Decorator
- Template Method
- Registry

Test Results

- **Unit Tests:** 16 tests covering various components
- **Integration Tests:** Ensure correct interaction between classes
- **Coverage:** 78% (Measured using Coverage.py, accessible via `start htmlcov/index.html`)
- **Interface testing:** Found minor UX issues to be improved
- **Payment Testing:** Successfully tested with PayPal sandbox account

Key Components

- **User** - Represents a user
- **Customer** - Linked to User, represents a customer
- **Category** - Represents a product category
- **Product** - Contains details like name, price, category, place, image, discount, and special mark
- **Order** - Linked to Customer, contains order date, completion status, and transaction ID
- **OrderItem** - Linked to Product and Order, contains quantity and date added
- **ProductAdmin** - Admin class for products, includes display, filter, and search fields
- **ProductDecorator** - Allows adding extra features to products
- **SaleDecorator** - Adds discount and sale price
- **SpecialOccasionDecorator** - Adds special occasion mark
- **Observer** - Interface for observers, includes `update` method
- **Subject** - Manages observer list and notifies them of changes
- **UserObserver** - Implements `update` method for users
- **Views** - Handles various views like registration, product list, product detail, cart, checkout, update item, and process order
